		Anthony G		2857				
Period fo	The MAILING DATE of this communication a or Reply	ppears on the	cover sheet with the c	orrespondence ac	ldress			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).								
Status								
1)⊠	Responsive to communication(s) filed on 19	April 2004.						
2a) <u></u> □	_							
3)	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.							
Disposition of Claims

Art Unit: 2857

DETAILED ACTION

Claim Objections

1. Claim 5 recites the limitation "the management data". There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 24, 26, and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCormack et al. (US Patent 6,128,579).

As to claim 24, McCormack et al. discloses a method for automated management of hydrocarbon gathering, the method comprising: collecting well test data from at least one of a plurality of producing wells in a hydrocarbon gathering system using the well test data to automatically reallocate hydrocarbon production to at least one of the plurality of producing wells (col. 2, line 68-col. 3, line 8).

As to claim 26, McCormack et al further discloses wherein the well test data is used to automatically populate regulatory forms (col. 12, lines 7-9).

As to claim 27, McCormack et al further discloses wherein the well test data is automatically reported to selected users (col. 12, lines 4-6).

4. Claims 25, and 28-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCormack et al. (US Patent 6,128,579) in view of Dutton et al. (US Patent 6,318,156).

As to claims 28, 35, 39, 40, 45, and 50, McCormack et al. discloses a method for automated management of hydrocarbon gathering, the method comprising: calculating a system balance for a selected balance envelope, collecting hydrocarbon sample test data, and using the hydrocarbon sample test data to recalculate the system balance (col. 2, lines 68-col. 3, line 8 and col. 8, lines 29-44).

McCormack et al. does not specifically disclose that the test data is from automated measurement and control devices.

Dutton et al., however, discloses a hydrocarbon sample test data from at least one of a plurality of automated measurement and control devices positioned in a hydrocarbon gathering system (col. 1, lines 35-48 and col. 3, lines 19-26).

Dutton et al. further discloses that a fully automated well test system does not require manual sampling or laboratory analysis and helps to eliminate volumetric measurement errors (col. 3, lines 19-26)

It would therefore have been obvious to modify the method of McCormick, to use automated measurement and control devices, as taught by Dutton et al. in order to reduce the costs and measurement errors that occur when manual labor is used.

Neither reference, however, teaches automatic calculation of a balance based on well test data.

Art Unit: 2857

Calculation of a balance based on well test data is disclosed by McCormack et al. (see Fig. 1, database 20 which includes reservoir data obtained in the field (col. 5, lines 1-38 and col. 9, line 62-col. 10, line 2) and col. 12, lines 4-16). As disclosed in the cited passages, an operator is advised of an optimal assignment of allocation factors for the reservoir or the material balance solution of process.

It would have been obvious, however, to one of ordinary skill in the art at the time of invention to automate this calculation since it has been held that broadly providing a mechanical or automatic means to replace manual activity which has accomplished the same result involves only routine skill in the art. (See *In re Venner*, 120 USPQ 192).

This would also apply to automatically updating a database after recalculation of the system balance since McCormack et al. teaches in the cited passages that the process of the system may be repeated for a new reservoir (see specifically col. 12, lines 10 and 11).

As to claims 31, 41, and 46, Dutton et al. further discloses wherein the plurality of measurement and control devices comprises electronic flow meters. (col. 5, lines 46-50).

As to claims 32, 33, 42, 43, 47, and 48 Dutton et al. further discloses wherein the plurality of automated measurement and control devices comprises programmable logic controllers and remote terminal units (col. 6, lines 58-64).

As to claims, 34, 44, and 49, Dutton et al. further discloses wherein the plurality of automated measurement and control devices comprises automated gas composition analysis devices (col. 5, lines 13-39).

Application/Control Number: 09/697,788

Art Unit: 2857

As to claims 36-38, Dutton et al. further discloses wherein the system balance comprises a volume, energy or natural gas component balance (col. 1, lines 20-45 and col. 5, lines 1-4).

5. Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over McCormack et al. (US Patent 6,128,579) in view of Streetman (US Patent 6,456,902).

McCormack et al. does not specifically disclose reallocating production costs to at least one of a plurality of producing wells.

Streetman, however, discloses that this is well known in prior art methods (col. 8, lines 10-17).

It would therefore have been obvious to one of ordinary skill in the art at the time of invention to produce a flow composition from multiple pipelines to minimize costs in order to allow greater possibilities for allocating financial resources.

6. Claims 29 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCormack et al. (US Patent 6,128,579) in view of Dutton et al. (US Patent 6,318,156), further in view of Streetman (US Patent 6,456,902).

As to claim 29, neither McCormack et al. nor Dutton et al. specifically disclose using the recalculated system balance to mix hydrocarbon products from at least two gathering pipelines to produce a desired hydrocarbon flow composition, wherein the desired hydrocarbon flow composition is selected to minimize hydrocarbon processing costs.

Application/Control Number: 09/697,788 Page 6

Art Unit: 2857

Streetman, however, discloses that this is well known in prior art methods (col. 8, lines 10-17).

It would therefore have been obvious to one of ordinary skill in the art at the time of invention to produce a flow composition from multiple pipelines to minimize costs in order to allow greater possibilities for allocating financial resources.

Allowable Subject Matter

7. Claims 1-4, 6-23, and 51-53 are allowed.

With respect to claim 5, as allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

8. The following is a statement of reasons for the indication of allowable subject matter:

The Applicant's claimed invention is deemed allowable over the prior art as the prior art fails to teach or fairly suggest using a data comparison between data obtained in a hydrocarbon gathering system and data stored in a database to automatically schedule a test of at least one of a plurality of automated measurement and control devices used to obtain the collected data.

Response to Arguments

9. Applicant's arguments with respect to claims 24-50 have been considered but are most in view of the new ground(s) of rejection.

Application/Control Number: 09/697,788

Art Unit: 2857

Page 7

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure.

US 220/0196788 A1 and US 6,739,394 B2, both to Vinegar et al., disclose methods

for treating a hydrocarbon formation that include the use of synthesis gases.

11. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Anthony Gutierrez whose telephone number is (571)

272-2215. The examiner can normally be reached on Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Marc Hoff can be reached on (571) 272-2216. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for published

applications may be obtained from either Private PAIR or Public PAIR. Status

information for unpublished applications is available through Private PAIR only. For

more information about the PAIR system, see http://pair-direct.uspto.gov. Should you

have questions on access to the Private PAIR system, contact the Electronic Business

Center (EBC) at 866-217-9197 (toll-free).
